Patent No. US20020146758A1
GENERAL INCRMATION:
GENERAL INCRMATION:
TITLE OF INVENTION: ISOLATED HUMAN RAS-LIKE PROTEINS,
TITLE OF INVENTION: NUCLEIC ACID MOLECULES ENCODING THESE ITLLE OF INVENTION: PROTEINS, AND USES THEREOF
FILE REFERENCE: CLO01188
CURRENT APPLICATION NUMBER: US/09/817,198A
CURRENT FILING DATE: 2001-03-27
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAAAAAAAAAAAA 3257

Sequence 30, Application US/09817198A

Patent No. US20020146758A1

GENERAL INFORMATION:

APPLICANT: YE, Jane et al.

TITLE OF INVENTION: ISOLATED HUMAN RAS-LIKE PROTEINS,

TITLE OF INVENTION: PROTEINS, AND USES THEREOF

FILE REPREMENCE: CLOOL1188

CURRENT APPLICATION NUMBER: US/09/817,198A

CURRENT PILING DATE: 2001-03-27

NUMBER OF SEQ ID NOS: 33

SOFTWARE: PSESSEQ for Windows Version 4.0

LENGTH: 601

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  771
                                                                                                                                                                                                                                                                                    /tissue type="PLACENTA COT 25-NORMALIZED"
/clone_lib="Homo sapiens PLACENTA COT 25-NORMALIZED"
/note="1st strand cDNA was primed with a NotI-oligo(dT)
primer. Five prime end enriched, double-strand cDNA was
digested with Not I and cloned into the Not I and EcoR v
sites of the pCMVSPORT 6 vector. Library was normalized.
Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster 7307.r For more information about this cluster, see http://www.genoscope.rms.fr/
